

Day 1:

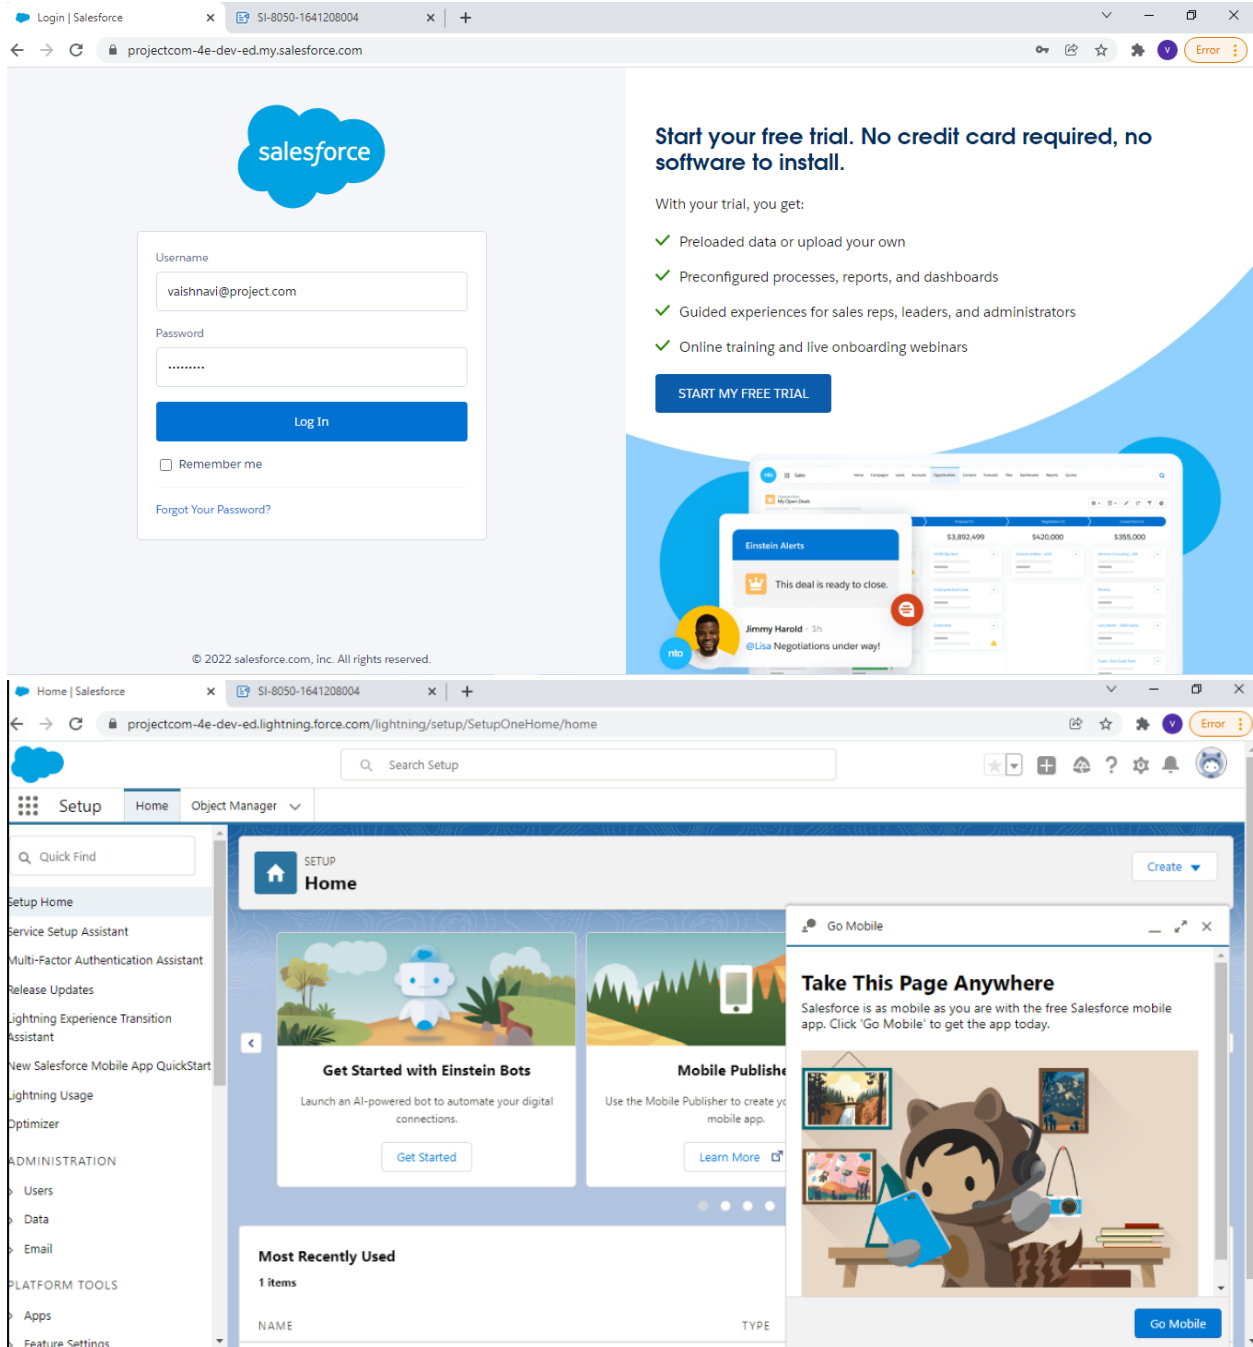

Topic: Create your salesforce Developer Org to Get Started

Milestone/Activities: Salesforce developer account creation, activation and login

Detailed Description: To setup a salesforce developer account specifically for this project, activate the account and login successfully.

Screenshots:

Day 2:

Topic: Custom Object Creation

Milestone/Activities: Create Custom Objects for the Application

Detailed Description: To Create Custom objects for the application such as Course object and Trainer Object.

Screenshots:

Course Object and Field relationship:

The screenshot shows the Salesforce Setup interface for the 'Course' object. The 'Fields & Relationships' section is active, displaying a list of 9 fields sorted by label. The fields are: Course Category (Picklist), Course Description (Text(50)), Course Duration (Picklist), Course Fee (Currency(18, 0)), Course ID (Auto Number, marked as the primary key with a checkmark), Course Name (Text(255)), Created By (Lookup(User)), and Last Modified By (Lookup(User)).

Field Label	Field Name	Field Type	Field Properties
Course Category	Course_Category__c	Picklist	
Course Description	Course_Description__c	Text(50)	
Course Duration	Course_Duration__c	Picklist	
Course Fee	Course_Fee__c	Currency(18, 0)	
Course ID	Name	Auto Number	✓
Course Name	Course_Name__c	Text(255)	
Created By	CreatedById	Lookup(User)	
Last Modified By	LastModifiedById	Lookup(User)

Current schema builder:

Day 4:

Topic: Automation processes

Milestone/Activities: Create work flow rules

Detailed Description: 1. create work flow rule 1 day after valid to date the active check box will uncheck automatically and inform owner:
2.create work flow rule 1 day before valid to date send a reminder email to owner:

Screenshots:

Work flow rule 1 one meeting object

The image displays two screenshots of the Salesforce Setup interface, specifically the 'Workflow Rules' configuration page for the 'Meeting' object. The top screenshot shows the 'Edit Rule' form with the rule name 'To change meeting status to' and the evaluation criteria 'created, and any time it's edited to subsequently meet criteria'. The bottom screenshot shows the same form with the rule name 'Work flow rule 1 day before' and the evaluation criteria 'created, and any time it's edited to subsequently meet criteria'. Both screenshots show the 'Rule Criteria' section with the formula 'Valid_To__c = 1'.

Top Screenshot:

- Object:** Meeting
- Rule Name:** To change meeting status to
- Description:** Work flow rule 1 day after valid to date, the active check box will uncheck automatically and inform owner.
- Evaluation Criteria:** Evaluate the rule when a record is:
 - ☐ created
 - ☐ created, and every time it's edited
 - ☒ created, and any time it's edited to subsequently meet criteria
- Rule Criteria:** Run this rule if the formula evaluates to true:
 - Example: OwnerId <> LastModifiedById (0) evaluates to true when the person who last modified the record is not the record owner.
 - Formula: `TODAY() - Valid_To__c = 1`

Bottom Screenshot:

- Object:** Meeting
- Rule Name:** Work flow rule 1 day before
- Description:**
- Evaluation Criteria:** Evaluate the rule when a record is:
 - ☐ created
 - ☐ created, and every time it's edited
 - ☒ created, and any time it's edited to subsequently meet criteria
- Rule Criteria:** Run this rule if the formula evaluates to true:
 - Example: OwnerId <> LastModifiedById (0) evaluates to true when the person who last modified the record is not the record owner.
 - Formula: `Valid_To__c - TODAY() = 1`

Workflow rule on Class/Batch Object:
